# Best answer: Xclip in revit?

### Description

Subsequently, can you crop a CAD file in **Revit**? No, you can only crop Views. Ideally, it would be great to be able to crop and create dependents from Drafting Views, but alas, one cannot.

Moreover, how do I create an **Xclip** boundary in Autocad? On the ribbon, choose Insert > Clip Xref (in Reference). On the menu, choose Modify > Xref Clip. Type xclip and then press Enter.

In this regard, what is Xclip used for? The **XClip** command allows us to clip/crop an external reference (xref) or block to a specific area that can be defined by either a rectangle or polyline. Other options within the command include the ability to invert or flip the clip, showing everything except the objects within the clipping boundary.

You asked, what is a clip block? Clipping is an illegal block in which a player hits an opponent from behind, typically at waist level or below.

## What is Revit annotation crop?

The annotation crop area can be used to crop tags, text, dimensions or other annotative elements separately from the model crop region.

## How do you crop a drawing in Revit?

1. If the view is not cropped, On the View Control Bar, click (Crop View).
2. If the view is cropped, but the crop region is not visible, click (Show Crop Region) on the View Control Bar.
3. Resize the crop region as necessary by using the drag control or setting the size explicitly.

## How do you crop a drawing in CAD?

Rest your cursor on the outside edge of the AutoCAD drawing until your cursor changes to this icon: Right-click, and then click Crop Tool. Drag the crop handles inward to eliminate extra portions of the AutoCAD drawing. Click outside the AutoCAD drawing to finalize the crop.

## How do you invert Xclip?

1. Select the XCLIP boundary.
2. The boundary of the XCLIP will show its grips along with an arrow grip.

3. Hover over the arrow grip and notice the text that appears â€œInvert x-clip boundaryâ€• Click this arrow to invert the xclip.

## How do you make an xref block?

In the External References palette, select the reference name that you want to bind. Right-click, and click Bind. In the Bind Xrefs dialog box, select one of the following options: Bind converts the objects in the xref into a block reference.

## What is AutoCAD clipping?

The clipping boundary determines a portion of an image, underlay, viewport, or external reference to hide. The visibility of the clipping boundary is controlled by the FRAME system variable. The list of prompts varies depending on whether you are clipping an underlay, image, external reference, or viewport.
