Introduction

If we choose Attachment type, then any xref thatâ€™s inserted into our drawing will carry through to **the** next one drawing when we **xref** your drawing into another drawing. Instead, if you choose Overlay type, then **the** xref thatâ€™s inserted into our drawing file will not carry through to the next drawing.

Subsequently, what is the difference between an overlay and an attached **xref**? An attached **XREF** is attached to **the** file and will follow it into future XREFâ€™s. **The** overlay is like a transperancy and does not follow if the new file is used as an **XREF**. If DWG â€œAâ€• is XREFâ€™d into DWG â€œBâ€• as an attachment, when you **XREF** DWG â€œBâ€• into another file it will bring the XREF of DWG â€œAâ€• with it.

Moreover, what is the **difference between** attachment and overlay? Attachment: Saves a copy of the xref drawing in your drawing. Overlay: Creates a link to **the** xref drawing in your drawing.

Quick Answer, what is an xref **overlay**? External references, or xrefs, are files brought into **AutoCAD** drawings as attachments or overlays. **The** option to **overlay** or attach an xref is available under the
