Best answer: How to move parts in inventor? â€“ The answer is in this article! Finding the right Autodesk inventor tutorials and even more, for free, is not easy on the internet, thatâ€™s why our CAD-Elearning.com site was created to offer you the best answers to your questions about Autodesk inventor software.
Millions of engineers and designers in tens of thousands of companies use Autodesk inventor. It is one of the most widely used design and engineering programs. It is used by many different professions and companies around the world because of its wide range of features and excellent functionality.
And here is the answer to your Best answer: How to move parts in inventor? question, read on.

Introduction

To move components in an assembly, click (Free Move) in the Assemble tab > Position panel, and select the component to move in the graphics window. Alternatively, you can select the component in the graphics window, right-click and select Free Move. Hold the left mouse button, and drag the component to a new location.

Likewise, how do you move components in Inventor?

1. On the ribbon, click Assemble tab Position panel Free Move .
2. Click the component to drag to the new location.
3. Release the mouse button to drop the component.

In this regard, how do you move a 3D part in Inventor? Right-click the grounded work point in the browser and select 3D Move/Rotate. Click the arrowhead of the X axis, for example, to open the dialog box. Right-click, select Move Triad Only, and then drag the triad to a new location.

Also, how do I drag Select in Inventor? Hold down CTRL as you click and drag to encompass a specified area. This action inverts the selection status of all objects in the selection window. In other words, the action selects all previously unselected objects and unselects all previously selected objects.

Correspondingly, how do you align parts in Inventor assembly?

How do you move an object in Autodesk?

1. Click Home tab Modify panel Move. Find.
2. Select the objects to move and press Enter.
3. Specify a base point for the move.
4. Specify a second point. The objects you selected are moved to a new location determined by the distance and direction between the first and second points.

How do you move shapes in Inventor?

1. In a 2D sketch, click Sketch tab Modify panel Move .
2. (Optional) In the Move dialog box specify any of the following:
3. In the graphics window, select the geometry you want to move:
4. If necessary, click Base Point in the Move dialog box to switch to that mode.
