1. In the Family Types dialog, select the parameter you wish to replace.
2. Click Modify.

Can you edit built in parameters in Revit?

Built-in parameters are part of the family templates you used. You canâ€™t edit or remove them. You only can gif them a default value. Just like the Identity data parameters like Type Comment, Description., etc.

What are project parameters Revit?

Project parameters are containers for information you define and then add to multiple categories of elements in a project. Project parameters are specific to the project and cannot be shared with other projects. You can then use those project parameters in multi-category or single-category schedules.

What are shared parameters in Revit?

Shared parameters are definitions of parameters that you can add to families or projects. Shared parameter definitions are stored in a file independent of any family file or Revit project; this allows you to access the file from different families or projects.

What is parameter in BIM?

Parameters are properties of the elements that form the model, including not only model and annotation objects, but also views and sheets. Every element in Revit has parameters, the name for its properties or attributes. Parameters can be classified depending on who creates it and in which file they are saved.
