Frequent answer: How to clip a xref in autocad?

Description

If your question is Frequent answer: How to clip a xref in autocad?, our CAD-Elearning.com site has the answer for you. Thanks to our various and numerous AutoCAD tutorials offered for free, the use of software like AutoCAD becomes easier and more pleasant.
Indeed AutoCAD tutorials are numerous in the site and allow to create coherent designs. All engineers should be able to meet the changing design requirements with the suite of tools. This will help you understand how AutoCAD is constantly modifying its solutions to include new features to have better performance, more efficient processes to the platform.
And here is the answer to your Frequent answer: How to clip a xref in autocad? question, read on.

Introduction

Select polyline/Rectangular: Choose Select polyline to create a clipping boundary from an existing polyline. You are then prompted to select the existing polyline that is located where you want to clip the external reference. Choose Rectangular to create a clipping boundary from a rectangle that you specify.

In this regard, how do you **clip** XREF?

1. Do one of the following: On the ribbon, choose Insert > **Clip Xref** (in Reference).
