You asked, how do you add a window in Revit? To place a window, select the window tool from the Architecture tab of the ribbon. In the Type Selector, choose the window family and the type you want to place. In this case, a fixed window sized 610 x 1220 mm is selected. Position the cursor near the wall of the office to place the window.

Quick Answer, how do you make a glass window in Revit?

Considering this, how do you edit a window in Revit? When you click Edit Type, Revit displays the Type Properties dialog. Each window type will have its own set of type parameters. When you switch to a different type, these values change, because the new window is a different size. Under Construction, you can override the Wall Closure setting for the current window Type.
