

# How to add folder in project browser in revit?

## Description

1. On the View tab, click the User Interface drop-down and choose Browser Organization.
2. Click the Sheets tab and then click the New button.
3. Give it a name and then click OK.
4. In the "Browser Organization Properties" dialog, on the Folders tab, choose the new custom Sheet **Folder** property for the first Group by item.

Amazingly, how do I **add** a tab in project browser Revit?

You asked, how do I organize a view in project **browser** Revit? Step 1: Right click inside the **project** browser and select "Browser Organisation" Step 2: Choose what you want to customise using the tabs and click "New" and give it a name. Step 3: Use the filters to customise what views to show or not show. Step 4: Choose how you want your views to be grouped and organised.

Correspondingly, how do I add a floor in project **browser** Revit?

1. Open the section or elevation view to **add** levels to.
2. On the ribbon, click (Level). Architecture tab Datum panel (Level)
3. Place the cursor in the drawing area and click.
4. Draw level lines by moving the cursor horizontally.
5. Click when the level line is the correct length.

Similarly, how do you add a level in **project** browser? To have the structural plans created go to View tab- under create you have an option plan view- in that select floor plan and select the level you just created. If my post answers your question, please click the "Accept as Solution" button. This helps everyone find answers more quickly! To resize the Project Browser, drag one of its borders. To move the **Project** Browser, drag the browser's title bar within the **Revit** window. As you move the cursor, an outline indicates where the **browser** will move to, and what its shape will be. Release the mouse button to place the browser in the desired location.

## How do you add subcategories in project browser Revit?

We should be able to create subcategories (as project parameters) by simply right-clicking on the categories (Views, Sheets, Schedules, Legends, etc), then just "drag-n-drop" items in those subcategories. This will look very intuitive, just like Windows drag-n-drop files in folders.

## What is browser organization in Revit?

Use the Browser Organization tool to group and sort views, sheets, and schedules/quantities in the way that best supports your work. You can specify 6 levels of grouping. Within groups, items are sorted in

ascending or descending order of a selected property.

## How do you separate project browser and properties in Revit?

1. Within the group, click the tab for the window you want to remove.
2. Click and drag the window tab out of the group.
3. Drop the window to ungroup it.
