You asked, how do you **change** the transparency of Glass in **Revit**?

Moreover, how do you edit a curtain wall in Revit?

1. Open a 3D view or an elevation view.
2. Click Architecture tab Build panel (Curtain Grid).
3. Click Modify | Place Curtain Grid tab Placement panel, and select a placement type.
4. Place the cursor along **wall** edges; a temporary grid line is displayed.
5. Click to place the grid lines.

Beside above, are **curtain** walls see through? They are **transparent** in regular 3d view but rendered they are solid. You need to make sure that the material property for the panels in the windows/curtain walls is set to a glass material. Judging by the image you posted, it looks like someone reset the Glass material to be the default wall material. In the Panel Properties go to the TYPE dialog box (Edit/New button) and select the Material parameter value Glass. This will take you to the Material dialog box and you can duplicate the Glass material and change the Shading color and Accurender texture for the new material Glass 1 for example.

How do you make a frosted glass wall in Revit?

How do you use transparency in Revit?

To apply to the entire view, access the transparency slider directly from the Model Display panel on the Graphic Display Options dialog. To apply to a category, filter, or an element, access Surface Transparency by right-clicking in the drawing area, and selecting Override Graphics in View.

How do you change the transparency of an image in Revit?
