2. Type in T1MJ and select the **Text** objects you want to convert.
3. Hit Enter! Your Single-line Text objects are now Single-line Mtext objects!

Best answer for this question, what is the difference between **mtext** and text in **AutoCAD**? Text, also called single-line text, or Dtext, makes every line a separate object. It's great for short annotation in a drawing. On the other hand, Mtext, also called multiline **text**, has more formatting options, and is better for larger amounts of **text**. Simple **text** would not be used for writing larger blocks of text. MText features provide extra functionality, they can contain multiple lines of **text** and they have the ability to contain several different fonts and styles within the same feature.

How do I convert a single line text to MText in AutoCAD?
