4. Move the cursor to define the offset dimension.
5. Click to finish the **offset**.

Also the question is, why is my push-pull limited in SketchUp? This is normal. Push/Pull is bumping into other geometry that is in the same context as the surface you are moving. If you have not noticed this in the past it is because the object you were push/pulling past was in a separate context, ie it was contained in a separate group or component.

Moreover, why canâ€™t I **offset** a line in SketchUp? You canâ€™t **offset** just one edge with the â€˜Offsetâ€™ tool in **SketchUp**. Youâ€™ll need to select at least two connected (or more coplanar connected) edges. Or a single face. The edges are needed to define the plane in which the offset will be taking place.

Quick Answer, how do you Presspull in SketchUp? Select the Push/Pull tool ( ) or press the P key. Click the face you want to push, as shown on the left in the following figure. Move the cursor in the direction you want to push. You can push partway into your model to remove only some of it, as shown on the right in the following figure.The Offset tool enables you to offset a line or shape quickly and easily. For example, perhaps youâ€™re a graphic designer who needs to outline a complex shape or an architect who needs to offset a footer in a foundation plan. Either way, the Offset tool can create the shape you need in only two clicks.

How do you push smooth surfaces in SketchUp?

With your Sketchup model open, navigate to â€œfileâ€• and hover over â€œFreedo6 Collectionâ€• to select â€œjoint push pull.â€• You can also get to the tool from your top menu bar. Select Surface > Joint Push Pull. To begin, select the surface you want to change.

Can you push pull multiple surfaces in SketchUp?

If we want to extrude (push/pull) a lot of faces the same distance, we might use the default SketchUp Push Pull tool, but it might take very long if we have a lot of faces. By default, if we push one face and then double click on different one, the new one will be push/pulled the same distance.

In SketchUp, any geometry thatâ€™s hidden is still there. You just canâ€™t see or select it. To see the hidden geometry or objects but keep them hidden, choose View > Hidden Geometry or View > Hidden Objects. All hidden entities appear in a ghosted pattern (as shown in the figure), allowing you to select them.

How can you avoid potential injury when pulling a load?

Keep the load close to the body for as long as possible while lifting. Keep the heaviest side of the load next to the body.
