## Tips for Importing SketchUp Files to Fusion 360

Here are a few tips to make the process of importing SketchUp files to Fusion 360 even smoother:

### Tip 1: Keep Your SketchUp File Simple

While SketchUp is great for creating complex 3D models, it’s important to keep your SketchUp file simple if you plan to import it to Fusion 360. Fusion 360 works best with simple geometry, so try to avoid using too many components, groups, or layers in your SketchUp file.

### Tip 2: Use the Right File Format

As we mentioned earlier, it’s important to export your SketchUp file in the right format. STL is a good choice because it’s a standard format that’s compatible with most [3D printing](#) software.

### Tip 3: Check Your Units

When exporting your SketchUp file, make sure you select the right units. Fusion 360 uses the [metric](#) system by default, so if your SketchUp file is in inches, make sure you select inches as your units when exporting.

### Tip 4: Check for Errors

Before importing your SketchUp file to Fusion 360, make sure you check for any errors or issues. SketchUp has a built-in “Solid Inspector”™ tool that can help you find and fix any errors in your model.
