And here is the answer to your How to install redshift for cinema 4d mac? question, read on.

Introduction

Quick Answer, how do I enable **Redshift** in Cinema 4D? Next we need to tell Cinema 4D to use Redshift as the current renderer. To do that, we open the Render Settings window by selecting Render from the Cinema 4D™'s menu bar and then Edit Render Settings. Then in the Render Settings window we select **Redshift** from the renderer selection drop-down box.

People ask also, does Redshift work on a **Mac**? On April 13th, 2021, Maxon announced the immediate availability of Redshift for macOS including support for M1-powered Macs as well as Apple™'s Metal graphics API. Redshift has rapidly become one of the most beloved third-party render engines in the 3D industry, given its rapid speed on NVIDIA PCs.

Beside above, where do I put **Redshift Cinema 4D**? These are two separate installers! Next, check that the installer has placed the **Redshift** plugin in your Cinema 4D application plugin folder which by default should be (in **Cinema 4D R18** as an example): Windows: C:\Program Files\MAXON\CINEMA 4D R18\plugins. macOS: /Applications/MAXON/CINEMA 4D R18/plugins.

Considering this, does **Cinema 4D** come with Redshift? Redshift is available in way more than just Cinema4D. Currently, Redshift is available for Cinema4D, Maya, 3DSMax, Houdini, Katana, and more in the works. Just like Solid Angle, Redshift doesn't charge you to use additional plugins either.
