

How to merge design options in revit?

Description

In the Design **Options** dialog, select the **design** option set that includes the desired option. If the desired option is secondary, select the design option in the list, and click Make Primary to promote it to the primary option. Under Option Set, click Accept Primary to incorporate the primary option into the main model.

Additionally, how do I move elements from one **design** option to another in **Revit**?

1. Click View tab Graphics panel (Visibility/Graphics).
2. In the Visibility/Graphics dialog, click the Design Options tab.
3. For the appropriate **design** option set, in the Design Option column, select Automatic.
4. Click OK.

Best answer for this question, how do I move something from **design** option to main model? Click Manage tab Design Options panel. From the drop-down list, select the **design** option in which the elements reside. In the drawing area, select one or more elements, and press Ctrl+X (Cut). See Selecting Elements in Design Options and the Main Model and Selecting Elements.

Frequent question, how do you change design **options** in Revit?

1. On the status bar, select the design option from the drop-down list.
2. Click Manage tab Design Options panel (Design Options).
3. Click Manage tab Design **Options** panel, and select the desired **design** option from the drop-down list.

Subsequently, where are **Revit** design options? On the Manage tab within Revit, select the Design Option button. Select the New button under Design Option Set to create a new option set called "Option Set 1". The first option will be automatically created and will be called "Option 1 (primary)".

How do I set design options in Revit 2021?

How do I copy a detail from one project to another in Revit?

Open the target Revit project (that is, the project in which you want to insert the existing drafting view). Click Insert tab Import panel Insert from File drop-down Insert Views from File. In the Open dialog, select a project file, and click Open.

How do I turn off design options in Revit?

In the Graphics panel, click Visibility/Graphics. In the Visibility/Graphic Overrides dialog box, click the Design Options tab. The dialog box will not have this tab if no design options exist in the project. In the Design Option column, select the design option override for each design option set.

How do I remove elements from a design in Revit?

1. Click Manage tab Design Options panel (Design Options).
2. If you are currently editing a design option, click Finish Editing.
3. In the Design Options dialog, select the design option to delete.
4. Under Option, click Delete.

How do you set up a design option?

1. Click Manage tab Design Options panel (Design Options).
2. In the Design Options dialog, under Option Set, click New.
3. To rename the option set, select the option set name, and under Option Set, click Rename.
4. To rename the primary option, select its name, and under Option, click Rename.

How do I add elements to design options?

1. Open a project view that shows the elements to be moved.
2. Click Manage tab Design Options panel, and select Main Model from the drop-down list.
3. Select the main model elements to move.
4. Click Manage tab Design Options panel (Add to Set).
5. In the Add to Design Option Set dialog, for Add selection to, select the desired set.

When working with design options what Cannot be placed in the Option Sets?

Annotations and details (such as keynotes, dimensions, and tags) are view-specific elements. They cannot be part of a design option. Deleting a design option or a design option set also removes the elements and views associated with the options.

What is exclude options in Revit?

Exclude Options: When checked (default), it prohibits users editing Design Options elements visible in the view while in the Main Model. When unchecked, users are able to edit elements from a Design Option visible in the view without having to active the required Design Option.

How do I merge Revit files?

1. Select the Linked File â€“ Modify â€“ Bind Link â€“ the Linked File will become a Group inside the host file.
2. Un-grouping the items from the former Linked File can now be modified and integrated into the host file.
