Who developed GML?

GML was developed in 1969 and the early 1970s by Charles Goldfarb, Edward Mosher and Raymond Lorie (whose surname initials were used by Goldfarb to make up the term GML). Using GML, a document is marked up with tags that define what the text is, in terms of paragraphs, headers, lists, tables, and so forth.

What are the basic geometries supported by GML?

For simplicity, the initial GML specification is restricted to 2D geometry, however, extensions will appear shortly which will handle 2 1/2 and 3D geometry, as well as topological relationships between features. GML encoding already allows for quite complex features.
