

How to save a project as a template in revit?

Description

Revit does not allow **template** files to be directly saved as a project file (using the Save As command). The process for creating a project from a **template** would be to select to create a **project** (Ctrl+N) and specify the template to use for the new **project**.

Also the question is, how do I turn a project into a template in Revit?

1. Open the Revit project file (RVT).
2. Save As a template file (.rte)
3. Remove items from the template that will not be re-used on all/most new projects.
4. Place in your designated template directory .
5. Set Starting view.

Similarly, how do you **save** a Revit **template**?

1. Click File.
2. Go to Save As.
3. Choose Template.
4. Choose a location and name and click **Save**.

Additionally, what is the difference between project and **project template** in **Revit**? Solution. RTE (template) files and RVT (**project**) files are actual **Revit**® projects. The difference between the two is that the template is used to start a new project. When you click on Save, you will not be allowed to overwrite the **template** file, but you will be prompted for a new file name and location.

Best answer for this question, how do I import a **Revit** model into a template?

1. Click (Add Value).
2. Navigate to the project template file, select it, and click Open. The **template** is added to the list. The default location for project template files is: %ALLUSERSPROFILE%\Autodesk\RVT 2018\Templates
3. Under Name, replace the default template name with a meaningful name.

How do I create a template in Revit 2021?
