As many you asked, how do you **change** the **color** of an element in Revit?

Similarly, how do I **change** a duct family in **Revit**? You need to amend your shared parameter file to add a new parameter (with the correct settings). Next go to the manage tab and locate project parameters. Add the new shared parameter, set it as an instance parameter and assign it to the **duct** category (and other categories if you know you will need it for pipes, etc).

Furthermore, how do you make a flex **duct** in Revit?

1. Open a view containing the **duct** system where you want to add flexible ducts.
  2. Click Systems tab HVAC panel Flex **Duct**.
  3. In the Type Selector, select a duct type that matches the ductwork where you want to connect the new duct.
  4. On the ribbon, select placement options.
- 
1. Disconnect the pipe from the pipe fitting and reconnect.
  2. While hovering over the element with the wrong classification, press the Tab key as many times as needed until the system becomes selected.

## How do you fill a shape with color in Revit?
