How are mullions measured?

The easiest way to measure this length is from the back rabbet cut. After the board is cut, set up the sash bit in the end cope configuration, and cut the ends of this board, just like you did on the rail ends in the frame. Re-arrange the bit in the groove/long configuration, and run the mullion board through the bit.

What is the difference between muntins and mullions?

Mullion/muntin: A mullion is a heavy vertical or horizontal member between adjoining window units. Muntins are the narrow strips of wood that divide the individual panes of glass in a traditional sash.

How far apart are mullions?

For example, given 5-foot mullion spacing at a 30 pounds-per-square-foot wind load, an aluminum mullion of 2.5 inches by 7.5 inches (including the glass and exterior cap) can span 12.5 feet.
