

Question: How to delete overlapping objects in revit?

https://caddikt.com/

Description

Remove the first Element Id in each subheading. Select elements by Id. Delete the selected elements. You may want to check for hosted elements on the IDs prior to deleting, and rehost them to the first element ID which was selected to ensure those donâ€™t get lost.

Moreover, is there an overkill command in Revit? Select objects in a drawing (use CTRL-A to select everything) and then type OVERKILL on the command line. Click OK on the Delete Duplicate Objects dialog window, adjusting settings as desired (the default options are usually sufficient). Overkill deletes information that is overlaying other items.

Beside above, how do you find overlapping elements in **Revit**? You can locate instances where two identical elements overlap by going to Manage tab Â» Warnings. This may be a little cumbersome, but it should work.

As many you asked, how do you delete **overlapping objects** in AutoCAD?
