Because the rapid acquisition of skills is usually considered to be desirable, a steep learning curve must be considered â€œa good thing.â€• Figure. A plot showing proficiency as a function of number of repetitions. The upper curve shows a steeper slope, and proficiency is achieved in few repetitions.

Additionally, what are the 4 types of learning curves?

1. Diminishing-Returns Learning Curve. The rate of progression increases rapidly at the beginning and then decreases over time.
2. Increasing-Returns Learning **Curve**.
3. Increasing-Decreasing Return Learning Curve (the S-**curve**)
4. Complex Learning Curve.
