Engineers in the fields of technical drawing use AutoCAD software to create a coherent design. All engineers must be able to meet changing design requirements with the suite of tools.

This CAD software is constantly modifying its solutions to include new features and enhancements for better performance, more efficient processes.

And here is the answer to your Question: How to print white hatch in autocad? question, read on.

Introduction

The solution is to highlight the text INSIDE the MTEXT object and change to 255 or 255,255,255, etc., however you chose to set up your pen settings. Then it will **print white**!

People ask also, why is my **hatch** white in AutoCAD? This issue will occur in AutoCAD when the calculated hatch pattern is too dense to display. This function is governed by the MaxHatch environment setting, which is a very rare thing to have to worry about.

As many you asked, how do you make the **hatch** print lighter in **AutoCAD**? You can set a default transparency value for all new objects and hatches that are created. To do so, with no objects selected, go to the View Ribbon tab, and on the Palettes panel click Properties to open the Properties palette. Here you can enter a number in the Transparency box from 0 to 90 percent.

Also the question is, how do you make a hatch visible in **AutoCAD**?
