

Quick answer: How to bend a section line in revit?

Description

Moreover, how do you break a **section** line in Revit?

1. Click the break control () and adjust the length of the section line segments.
2. To rejoin the section **line**, click the break control again. Note: A break in a section line is view-specific. It affects the display of the section only in the view where the break was made.

Furthermore, how do you take a curved **section**? Set the section view properties: Hold down Shift and on the Views tab, click Curved **section** view. Modify the view properties as required, and click OK or Apply. Pick three points on the cut plane. Pick two points to indicate the cut box.

Additionally, how do you break a section **line**?

You asked, can you jog a **section** cut in Revit? Yes. Create a section. Select the section, and on the options bar, there is a button that says "Split segment". Press that, and you have your jogged section. If **Revit** does not support full-fledged curved sections OOTB, then you cannot create them programmatically either. However, you could perfectly well create something quite similar yourself using the API. The most difficult part to achieve might be full associativity.
