

# Quick answer: How to change camera lens in revit?

## Description

Furthermore, how do I **change** camera settings in Revit?

1. Open the 3D view.
2. In the Project Browser, right-click the 3D view name, and select Show **Camera**.
3. In the Project Browser, double-click the view in which you want to modify the **camera** position (for example, the plan view or the elevation view).
4. Drag the camera to move it.

Also, how do you change camera **lens** size in Revit? Click the "Full Navigation Wheel" on the right of your screen. With the navigation wheel open, right click the wheel. Left-Click where it says "Increase/Decrease Focal Length". Click and drag the mouse to increase or decrease the focal length of the camera view.

Similarly, how do I change the field view of a camera in Revit? In order to **change** the **camera** position, you can simply drag the camera to a new location. As you drag the **camera**, realize that it only rotates about the target point. Also, the far clip plane always remains the same distance from the camera. As you drag the camera, the field of view changes.

You asked, how do you use the camera feature in Revit?

1. When Angles is selected in the left panel, the right panel displays options for specifying the fitting angle that **Revit** will use when adding or modifying pipe.
2. Select Use any Angle to have **Revit** use any angle supported by the fitting content.

## How do I make perspective view bigger in Revit?

Use the Size Crop tool to change the size of a perspective view to place on a sheet. Select the crop boundary then click on the Size Crop tool. Use the Scale (locked proportions) to keep the same proportions. Change the values until you get the size you want.

## How do you view a camera in Revit?

In the Project Browser, right-click the Revit Perspective view and in the pop-up menu, click Show Camera. Or, with both the Plan view and the Perspective view open, click the FOV frame in the Perspective view, and the Camera will appear in the Plan view.

## How do you change the 3D view in Revit?

1. Open a 3D view.
2. On the Properties palette, under Extents, select the Section Box option.
3. Click OK.
4. Select the section box and use the drag controls to modify the extents, as necessary. The following image shows the section box selected with the blue arrow drag controls visible.
