

# Quick answer: What is underlay in revit?

## Description

When you set an **underlay**, Revit displays another level of the model at the view's cut plane under the current plan view. The underlay can be viewed from above or below the current level. The underlay appears in halftone and is visible in a hidden line view.

Best answer for this question, how do you underlay a level in Revit?

1. In the Project Browser, open a plan view.
2. On the Properties palette, for Range: Base Level, select the level you want to **underlay**. Range: Top Level is automatically set to one level above the Base Level.
3. On the Properties palette, for Underlay Orientation, select Look Up or Look Down.

Beside above, how do you change the underlay in Revit?

1. Click Manage tab Settings panel Additional Settings drop-down (Halftone/**Underlay**).
2. In the Halftone/Underlay dialog, under Underlay, define the following settings:
3. Under Halftone, for Brightness, enter a value or use the slider to specify a setting between Light and Dark.
4. Click OK.

People ask also, what is the purpose of using an **underlay** when creating floors or roofs? As a roofing membrane, the purpose of underlay is to help to prevent water that has penetrated through or under the roof covering from leaking into the building. There are non-breathable underlays and breathable underlays based on ventilation requirements of the roof.

In this regard, how do you see the below floor in Revit?

1. In plan view, click View menu > View Properties.
2. Click the Edit button for the View Range parameter.
3. Enter a value for both the Bottom Offset, under Primary Range, and the Level Offset, under View Depth, that is more than 4 feet from the floor or slab.

View depth is an additional plane beyond the primary range. Change the view depth to show elements below the bottom clip plane. By default, the view depth coincides with the bottom clip plane.

## What is the difference between overlay and attachment in Revit?

When linking a Revit model, Revit gives two options: Attach or Overlay. This defines the visibility of nested models (models linked to the link) in the main model. Attachment loads nested linked models

and displays them in the project, Overlay only loads the linked model (and not the ones linked into it).

## What is ceiling in Revit?

By default, the Automatic Ceiling tool is active. When you click inside walls that form a closed loop, the tool places a ceiling within those boundaries. It ignores room separator lines. Sketch ceiling boundaries. Click Modify|Place Ceiling tab Ceiling panel (Sketch Ceiling).

## How do I show furniture underlay in Revit?
