

Revit cant delete family type?

Description

In the Project Browser, expand the category that contains the family or type that you want to delete. If you want to delete a loadable family **type**, expand the family. Select the family or **type** to **delete**.

Also know, why I **cant delete** a family in Revit? With some families the delete command is unavailable, it is grayed out. Why is this happening and how can I **delete** family type in such case? Right click the family type and "select all instances in entire project". Delete the instances first, then you can delete the type.

Subsequently, how do I delete an imported **family** in Revit? Choose the plus icon to expand the list of imported categories to review. Choose the Purged Unused tool from the Manage Panel in **Revit**. Review Imported Symbols in Families and check items that are NOT used that you would like to purge or delete. The Purge Unused tool in Revit works as a multi-step process.

Moreover, can you change **family type** in **Revit**? Once you have the family file open, simply click on Family Category and Parameters on the Ribbon. Here you will be able to see the **family** type and change it. Once you've done that, you can reload the **family** in the project. Now, you will be able to insert it as the new **family** type you have set.

Furthermore, how do you **delete** a material parameter in Revit?

1. View parameter properties. Click Manage tab Settings panel (Shared Parameters).
2. Move a parameter to another parameter group.
3. Delete a parameter.
