

Revit will use raster printing?

Description

Printing “ Setting Changed for Shaded Views **Revit** will **use** raster printing because this view uses shading, shadows, point clouds, sketchy lines, depth cueing or gradients. To use vector **printing**, use the View Control bar at the bottom left of the view window to turn off these options.

Subsequently, is Revit a vector program? For the remaining views and sheets in the set, **Revit** uses vector processing. If a sheet contains multiple views, Revit uses raster processing only for the views that require it. For other views on the sheet, Revit uses vector processing.

Furthermore, how do you print in **Revit**?

1. Click Application menu -> Print / Type Ctrl+P.
2. In the Print dialog, for Name, select a printer.
3. Under Print Range, specify whether you are **printing** the current window, a visible portion of current window, or selected views/sheets.

Quick Answer, why is **Revit** not printing? Restart the system (this ensures that the issue is not specific to the current session of Windows, i.e. something hung up that would be cleared by restarting). Restart the printer (this ensures that a lockup with the printer is not causing the behavior). Update Revit (if possible).

Similarly, what is vector processing Revit? For the remaining views and sheets in the set, Revit uses vector processing. If a sheet contains multiple views, Revit uses **raster** processing only for the views that require it. For other views on the sheet, Revit uses vector processing.

How do I convert a sheet to a PDF in Revit?

Under Print Range, select Selected Views/Sheets. Click Select. In the View/Sheet Set dialog, select the views and sheets to print to PDF, and click OK.
