You asked: How to cut one body from another fusion 360?

Description

With this article you will have the answer to your You asked: How to cut one body from another fusion 360? question. Indeed Fusion 360 is even easier if you have access to the free Fusion 360 tutorials and the answers to questions like. Our CAD-Elearning.com site contains all the articles that will help you progress in the study of this wonderful software. Browse through our site and you will find different articles answering your different questions.
The use of parametric design in Fusion 360 makes it a powerful tool for designers and engineers. The designer can observe the impact of adjustments on neighboring components or even on the entire solution. This makes it quick and easy for designers to identify and solve problems.
And here is the answer to your You asked: How to cut one body from another fusion 360? question, read on.

Introduction

Also the question is, how do you cut a shape out of another shape in Fusion 360? sketch on a plane that is either outside or inside of this shape, then draw your star, then Extrude cut the shape. Thank you for your time & help Jeff!

Correspondingly, how do you separate two parts in Fusion 360?

Frequent question, how do you cut bodies in fusion?

1. From the Solid menu select Modify > Split body.
2. Select Body to Split.
3. Select Body to use as the splitting tool.
4. Select OK to create the split.

You asked, how do you cut a surface in Fusion 360?

How do you split an object in half Fusion 360?

Choose Modify > Split Body. For Body to Split, select the solid that you want to split. For Splitting Tool, select the object that will split the body. If the splitting object does not already intersect the body, select Extend Splitting Tool.
