

You asked: How to move sketch in fusion 360?

Description

With this article you will have the answer to your You asked: How to move sketch in fusion 360? question. Indeed Fusion 360 is even easier if you have access to the free Fusion 360 tutorials and the answers to questions like. Our CAD-Elearning.com site contains all the articles that will help you progress in the study of this wonderful software. Browse through our site and you will find different articles answering your different questions.

The use of parametric design in Fusion 360 makes it a powerful tool for designers and engineers. The designer can observe the impact of adjustments on neighboring components or even on the entire solution. This makes it quick and easy for designers to identify and solve problems.

And here is the answer to your You asked: How to move sketch in fusion 360? question, read on.

Introduction

Amazingly, how do you move a sketch to a component in **Fusion** 360? Solution: Drag and drop the body and the sketch into the desired component in the Browser Tree. Note: It is a good idea to keep the sketch simple and related only to the individual body that is being moved. If projections are made from or into the sketch being moved it might affect the model after being moved.

Similarly, how do you **move** a **sketch** vertically Fusion 360? If you want to **move** items in a **sketch** youâ€™ll have to right-click and select edit **sketch**. Then you can select the sketch elements you want to **move**, either by left clicking on them individually while holding the ctrl (Win) or Command(Mac) key and then right-click and select the move tool.

Subsequently, how do you move sketch dimensions in Fusion 360? If you want to move your dimensions around, at any time, youâ€™ll simply need to click anywhere on the dimension line and then you can drag the dimension around.

You asked, how do you drag objects in **Fusion** 360? You can copy Components between designs, so if the body is in a component on its own, select the component and Copy change to the other design right click on the canvas and select Paste New. If the body is in a component with other bodies youâ€™ll have to use Create components from bodies first.
