

# You asked: How to rename parameters in revit?

## Description

1. Click Manage tab Settings panel (Shared Parameters).
2. In the Edit Shared **Parameters** dialog, select the group from the Parameter group menu.
3. Click **Rename**.
4. Enter the new name, and click OK.

Moreover, how do I change a parameter name in **Revit**? In the Parameter Properties dialog, select Project parameter. Enter a name for the project parameter.

Best answer for this question, how do you rename family parameters in Revit?

1. Select the **Rename Shared Parameter** button within the **Rename Shared Parameter** Panel of the Add-Ins Ribbon Tab.
2. This will open the **Rename Shared Parameters** dialog (Image-1) and display all the shared parameters within the open project, template or family document.

Frequent question, can you rename a shared parameter in Revit? In order to manually change the parameter names to those used in the shared parameter file requires you to record where it is used, the values it has, then delete the existing parameter in the project file (via the API) and then reinsert the new parameter and reestablish all of the places it was used and the values!

Furthermore, how do you rename a parameter?

1. In the parameter list, overwrite the parameter name and save your entry or press ENTER.
  2. If you only want to rename the parameter at this location, choose **Rename**.
  3. If you want to check the list of usage locations before renaming, choose Display All Usage Locations of Parameter.
- 
1. Click the > Settings.
  2. From the side bar, click Parameters.
  3. To locate the parameter you want to edit, you can enter its name in the search box or sort the columns.
  4. Click the row of the parameter you want to change.
  5. Click the edit icon .
  6. In the Display Name box, enter a new name for the parameter.

## How do you change parameter values in Revit?

1. Select desired element and click edit family.
2. Change the value of the parameter inside the family.

3. Load it back to Revit with choosing to override the parameter values.

## What are the different ways to create a parameter?

1. In the Data pane, click the drop-down arrow in the upper right corner and select Create Parameter.
2. In the Create Parameter dialog box, give the field a Name.
3. Specify the data type for the values it will accept:
4. Specify a current value.
5. Specify a value when the workbook opens.

## How do you change parameters in Inventor?

1. In the Parameters dialog, locate the parameter to change.
2. To change the Parameter Name, Equation, or Comment, click in the corresponding box to select the existing value and then enter the new value.
